

Invitation of suggestions/comments on the draft Diagnostic Toolkit for ensuring competitive and transparent tenders

Public procurement has an overarching economic and social significance in the overall context of good governance. It relates directly to the delivery of good and services in various sectors and affects the efficiency of the procuring enterprise.

Accordingly, the CCI has uploaded a “*Diagnostic Tool – Towards Competitive Tenders*” (**Diagnostic Toolkit**) that seeks to serve as a practical guide for procurement officials who can use it for the review of their public procurement system. The same can be accessed at: - [Final Diagnostic Tool](#)

This Diagnostic Toolkit has been prepared drawing from national and international policy documents, as well as the practical experience of the Commission. The Diagnostic Toolkit has been uploaded on the website of the Competition Commission of India (**CCI**) since March 2018 and has been discussed in various training/advocacy programmes held by the CCI for public procurement Officials.

The users of the Diagnostic Toolkit may thus provide their suggestions/comments/experiences at the email address anand@cci.gov.in, within ten days from the date of publication of this communication seeking suggestions/comments.
